Subject: Fwd: Re: Requirement for Temporary Cessation of Operations - Crandall

Priscilla- Tom Faddies called me 9/25/07 and re-iterated that Sitla wants OGM to oversee closure of Sitla holes. He suggested that 'at a minimum, Shaver and driller should certify hole plugging.' He further suggested that 'protection of the resource was moot and protection of the aquifer between Blackhawk and Ferron SS could be accomplished via a plug between the 2 formations. Keep it simple. The e-log should show where the 2 formations are.'

They are definitely delegating to OGM. Priscilla, I told him you are the lead person and that you would seek hydro-engr-geo help as needed from the team.

Karl told me that MSHA and you did a great job last night at the MSHA -family meeting. Thanks very much to the both of you!

Good Morning!

I spoke with John Blake yesterday. He wants DOGM to oversee closure of SITLA holes. At a minimum he wants a certified statement from the driller describing closure.

I have left messages with Dave Shaver requesting a copy of the geophysical logs and the drill hole closure plan.

I have attached meeting notes that describe the reclamation plans to date. The plans have been somewhat of a moving target...as we try to accommodate the state and federal agencies, the families, and the driller's requirements.

More information (such as photographs) is located in O:015/0032.cra/Emergency Drill Holes.

I am meeting at the site tomorrow with USFS, the contractor, and DOGM technical staff.

okay John works for Faddies.

>>> Priscilla Burton 09/24/2007 3:37 PM >>>
Thanks,
I left a message on Tom's phone to call me. It was John Blake who called Daron this a.m.
Priscilla.
